

## Forest School

This week Jade class experienced Forest School where they constructed and built their own bow and arrows. They tested them and had a competition on how hard they could get their arrow. It is safe to say that we will have a lot of children practicing at home to improve that skill, but we discussed not using our siblings as a target!

We also had the opportunity to do 'raisins dance' in our Science lesson. The children had to predict how we might make the raisins dance and what might happen when we mixed a solid and gas together! The results were amazing, and the children loved exploring how the gas bubbles made the raisins jump up and down and even spin!
